

Date: 1/25

Wednesday Challenge Form

Group Members: Zachary, Paul, Max, Justin

Problem Statement: Every robotics challenge Veterans give out trinkets to the people they go Against and we had to come up with them

Approach: Me and my team decided to stick With the theme of the challenge and use gears On the trinket. The idea we finally chose to do was to make a box and put two twistable gears on the front of it that we could spin them along with putting the numbers 589 on the front of it.

Solution: The team that won had a pretty cool Idea which was to use a stick along with paper to make an object that could spin after being twisted in your hand

Lessons Learned: We learned that we should have found the cost of what we were making first and that we should have figured out the material.
